

Offshore wind turbine service technician m/f

Job and assignments

The technician ensures maintenance and service and supervises offshore wind turbines. He/she monitors and upgrades the turbine performances through preventive and/or corrective action. The technician also starts machines and equipments and writes reports on his/her actions. He/she ensures Quality, Safety and Environment Standards.

Work environment

Service technicians fulfil their tasks at offshore windfarms, maintenance workshops, and onshore control rooms. Offshore interventions in sometimes poor weather can prove difficult and you will need to be fit and have sea-legs, especially when working at heights. A significant flexibility is required for your interventions, especially at night and this is a team job. Skills and competence in control command from control panels and electronic interfaces are necessary to monitor the installations. The technician may work in an international and multicultural environment and is expected to relocate for missions in France or abroad. Working as an offshore wind turbine technician means promising prospects for your career.

Inter-personal and expert skills

- You are diligent, multi-tasking and pro-active
- Both for maintenance or operations, you can anticipate and address issues in the process that you manage
- Your mind is set on quality and safety
- Your English is fluent
