

Process engineer m/f

Job and assignments

Within engineering, process engineers define, study, design and optimize industrial production installations, ensuring smooth running. They report to the department manager (or R&D) and assist him/her to meet deadlines and quality standards for the surveys.

Work environment

Process engineers interface with R&D and production and liaise with department and workshop managers. They are needed to implement production processes onsite-workshops, aboard ships being built and during test phases.

Inter-personal and expert skills

- You have perfect control of the processes (PID, dimensioning calculation...)
- You have excellent knowledge of continuous improvement processes
 - Your English is proficient
 - You are creative, proactive and a good listener
 - You have powers of observation and an ability to summarize and analyze issues
 - You have teaching skills, team spirit and interpersonal skills to liaise with clients within/outside the company
